# Freedom Design

Reduce chassis flex and increase torsional rigidity of body and suspension with a Freedom Design strut tower brace. By linking the shock towers, you reinforce the chassis and add stiffness, which results in improved handling and steering response. These are a must for cars with lowering springs or "plus" size wheel/tire combinations.

Billet Style Aluminum

Reinforced Aluminum

Tubular Stainless Steel

Our billet-style and tubular extrusions are machined from aircraft quality aluminum and are hand polished to a high sheen. For applications that require special bends, our tubular stainless steel braces are manufactured from commercial grade stainless steel tubing, and are polished to a mirror-like finish.

Tubular Aluminum
